

**IN THE CLAIMS:**

The text of all pending claims are set forth below. Cancelled and withdrawn claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~striketrough~~. The status of each claim is indicated with one of (original), (currently amended), (previously amended), (cancelled), (withdrawn), (new), ~~(previously added)~~, (reinstated - formerly claim #), (previously reinstated), (re-presented - formerly dependent claim #) or, (previously re-presented). Please AMEND claims 1, 10-16, 18 and 19 in accordance with the following:

---

1. (currently amended) A computer implemented management system, which manages registration of computer-related products, including hardware and software products, comprising:

a user information general management means, generally managing user registration information, about users of hardware and software products, and using status information thereof transmitted from the user; and

a user registration/reference means that interfaces with the users notifying said user information general management means of the user registration information and the using status information at a request of the user and the using status information,

wherein the user registration information ~~comprises~~ includes personal information about each user containing an identification number of each user and registration information containing a type of information which is requested by the users with regard to the computer-related products, said type of information can include information about products which can be used in combination with products that are used by the users and available from a plurality of vendors, and said type of information further signifies a difference in vendor of said products that can be used in combination with products that are used by the user, in terms of whether the vendor is the same or not with the vendor of the products that are used by the user, and

new information about the computer-related products from a vendor side of the computer-related products is extracted, depending on information extraction condition containing a requested information type in the registration information, and is transmitted to said user registration/reference means from said user information general management means to provide the new information, and

the user registration information, ~~also comprising~~ including a number of times a particular software product is used by the user, is transmitted from the user information general

management means to a different vendor other than the software product's vendor ~~with the different vendor selling, that sells~~ products that may be of interest to users of the particular software product.

2. (previously amended) The system according to claim 1, wherein  
said user registration/reference means requests at a request from the user said user information general management means to provide new information about the computer-related product from a vendor of the computer-related product.

3. (previously amended) The system according to claim 1, wherein the computer-related product is a software product, and said user registration/reference means is common to each of a plurality of software products;  
when any of the plurality of software products is installed by a user, the user registration/reference means is also installed; and  
after installation, said user registration/reference means issues a notification about the user registration information and using status information for the plurality of software products which are installed, and submits a request for new information about the software product.

4. (previously amended) The system according to claim 1, wherein said user registration information comprises:  
personal information about each user including an identification number of each user; and  
registration information containing a type of information requested by the user about a computer-related product; and  
said user information general management means extracts the new information depending on information extraction condition containing a requested information type in the registration information at a request for new information about a computer-related product from said user registration/reference means, and transmits the new information to said user registration/reference means.

5. (previously amended) The system according to claim 1, wherein the computer-related product is a software product and the using status information contains the number of times the software product was started; and

said user information general management means transmits new information about the software product to said user registration/reference means depending on the number of times the software product was started.

6. (previously amended) The system according to claim 1, wherein the computer-related product is a software product and the using status information contains the number of times the software product was started; and

said user registration/reference means requests said user information general management means to provide new information about the software product when the number of times the software product was started has reached a predetermined value.

7. (previously amended) The system according to claim 1, further comprising:

a vendor registration/reference means for obtaining the user registration information and the using status information from said user information general management means, and notifying said user information general management means of new information about the computer-related product.

8. (previously amended) The system according to claim 7, wherein the user registration information contains a type of information, requested by a user, about a computer-related product;

said vendor registration/reference means specifies a type of new information when new information about the computer-related product is available; and

said user information general management means compares the type of information requested by the user with the type specified by the vendor registration/reference means, and when both types coincide, transmits the new information to said user registration/reference means at a request from said user registration/reference means when the requested information is available.

~~9.~~ (cancelled)

10. (currently amended) A management apparatus which manages user information about a computer-related product used by a user terminal connected through a network, comprising:

a user information general management means for managing using status information and a requested information type provided by the user terminal about a product used by a user;

a product information management means for managing product information provided by a vendor of the computer-related product including product information about additional products that can be used with a particular product; and

a product information notification means for referring to a product used by each user managed by said user information general management means and for providing product information managed by said product information management means about a product used by a user which corresponds to the products available from a plurality of vendors that can be used with the product used by the user and match the user's requested information type, wherein said requested information type further signifies a difference in vendor of said products that can be used in combination with products that are used by the user, in terms of whether the vendor is the same or not with the vendor of the products that are used by the user, and

the using status information, ~~also comprising~~ including a number of times a particular software product is used by the user, is transmitted ~~to a different vendor other than the software product's vendor~~ from the user information general management means to a different vendor other than the software product's vendor, ~~the different vendor selling, that sells~~ products that may be of interest to users of the particular software product.

11. (currently amended) A computer-readable storage medium encoded with software to cause a computer to perform ~~the actions of~~ a process comprising:

managing using status information and a requested information type provided by a user terminal about a product used by a user;

managing product information provided by a computer-related product vendor including product information about additional products available from a plurality of vendors that can be used with a particular product, wherein said requested information type further signifies a difference in vendor of said products that can be used in combination with products that are used by the user, in terms of whether the vendor is the same or not with the vendor of the products that are used by the user;

referring to the using status information and providing product information about additional products that can be used with the product used by a user and which corresponds to the requested information type at a product information request from the user terminal; and

transmitting the using status information, ~~comprising~~ including a number of times a particular software product is used by the user, to a different vendor other than the software product's vendor ~~with the different vendor selling, that sells~~ products that may be of interest to users of the particular software product.

12. (currently amended) A user terminal apparatus comprising:

a user information notification means for notifying an external unit of user registration information and using status information including a product used by a user and a requested information type about the computer-related product; and

*KI  
could*  
a product information reference means for requesting an external unit for new information about the computer-related product which corresponds to the requested information type from a computer-related product vendor and information on additional products available from a plurality of vendors that can be used with the product used by the user, and said requested information type further signifies a difference in vendor of said products that can be used in combination with products that are used by the user, in terms of whether the vendor is the same or not with the vendor of the products that are used by the user,

a using status transmitting means transmitting the using status information, ~~comprising~~ including a number of times a particular software product is used by the user, to a different vendor other than the software product's vendor ~~with the different vendor selling, that~~ sells products that may be of interest to users of the particular software product.

13. (currently amended) A computer-readable storage medium encoded with software for causing a computer to perform ~~the actions of~~ a process comprising:

notifying an external unit of user registration information and using status information including a product used by a user and a requested information type about a computer-related product used by a user; and

requesting an external unit for new information about the computer-related product which corresponds to the requested information type from a vendor of the computer-related product and information on additional products available from a plurality of vendors that can be used with the product used by the user, and said requested information type further

signifies a difference in vendor of said products that can be used in combination with products that are used by the user, in terms of whether the vendor is the same or not with the vendor of the products that are used by the user,

transmitting the using status information, ~~also comprising~~ including a number of times a particular software product is used by the user, to a different vendor other than the software product's vendor ~~with the different vendor selling, that sells~~ products that may be of interest to users of the particular software product.

14. (currently amended) A ~~vendor~~ terminal apparatus of a vendor, comprising:

a user information reference means for obtaining, from an external unit, user registration information including a requested information type and using status information including a product used by the user, transmitted from a user of a computer-related product; and

a product information notification means for notifying an external unit of new information about the computer-related product, if the new information about the computer-related product corresponds to the requested information type, the new information including additional products ~~available from a plurality of vendors~~ of the vendor that can be used with the product used by the user, and said requested information type further signifies a difference in vendor of said products that can be used in combination with products that are used by the user, in terms of whether the vendor is the same or not with the vendor of the products that are used by the user,

a using status information receiving means receiving the using status information, ~~also comprising~~ including a number of times a particular software product is used by the user,

wherein, the ~~vendor~~ terminal apparatus can use the user registration information and the using status information from a user of a product of a different vendor rather than the vendor ~~itself with the different vendor selling, that sells~~ products that may be of interest to users of the particular software product.

15. (currently amended) A computer-readable storage medium encoded with software to cause a computer of a vendor to perform ~~the actions of~~ a process comprising:

obtaining, from an external unit, user registration information including a requested information type, and using status information including about usage of a product used by a user, transmitted from the user of a computer-related product;

notifying an external unit of new information about the computer-related product, if the new information about the computer-related product corresponds to the requested information type, the new information including additional products ~~available from a plurality of vendors of the vendor~~ that can be used with the product used by the user, and said requested information type further signifies a difference in vendor of said products that can be used in combination with products that are used by the user, in terms of whether the vendor is the same or not with the vendor of the products that are used by the user; and

receiving the using status information, ~~comprising~~ including a number of times a particular software product is used by the user,

wherein, the computer-readable storage medium is used by a computer that can use the user registration information and the using status information from a user of a product of a different vendor rather than the vendor ~~itself with the different vendor selling, that sells~~ products that may be of interest to users of the particular software product.

16. (currently amended) A computer implemented management system, which manages registration of computer-related products, comprising:

a user information general management module generally managing user registration information including a requested information type, and using status information including a product used by a user, transmitted from a user of the computer-related product; and

a user registration/reference module that interfaces with a user of the computer-related products notifying said user information general management module of the user registration information and the using status information and information about additional products available from a plurality of vendors that can be used with the product used by the user at a request of the user who uses a computer-related product related to the user registration information and the using status information and which corresponds to the requested information type, wherein said requested information type further signifies a difference in vendor of said products that can be used in combination with products that are used by the user, in terms of whether the vendor is the same or not with the vendor of the products that are used by the user,

a using status information module transmitting the using status information, also ~~comprising~~ including a number of times a particular software product is used by the user, to a different vendor other than the software product's vendor ~~with the different vendor selling, that~~ sells products that may be of interest to users of the particular software product.

17. (previously added) The system according to claim 16, wherein  
the computer-related product is a software product, and said user  
registration/reference module is common to each of a plurality of software products;  
when any of the plurality of software products is installed by a user, the user  
registration/reference module is also installed; and  
after installation, said user registration/reference means issues a notification  
about the user registration information and using status information for the plurality of software  
products which are installed, and submits a request for new information about the software  
product.

18. (currently amended) A user registration center managing and distributing  
information provided by both a user and a vendor comprising:  
a database receiving, from the vendor product information about a product and  
additional product information about additional products that can be used with the product;  
the database receiving, from the user, user information which includes a product  
used by the user and a requested information type from the user; and  
a distributing module, automatically distributing to the user, additional product  
information corresponding to the additional products available from a plurality of vendors that  
can be used with the product used by the user and which match the user's requested  
information type, wherein said requested information type further signifies a difference in vendor  
of said products that can be used in combination with products that are used by the user, in  
terms of whether the vendor is the same or not with the vendor of the products that are used by  
the user,  
a using status information module transmitting the user information, also  
~~[comprising]~~ including a number of times a particular software product is used by the user, to a  
different vendor other than the software product's vendor ~~with the different vendor selling, that~~  
sells products that may be of interest to users of the particular software product.

19. (currently amended) A method of managing and distributing information provided by  
both a user and a vendor, comprising:  
receiving, from the vendor, product information about a product and additional  
product information about additional products that can be used with the product;

receiving, from the user, user information which includes a product used by the user and a requested information type from the user;

storing the product information about a product and additional product information about products available from a plurality of vendors that can be used with the product and the user information which includes a product ~~user~~ used by the user and the requested information type from the user, all in a database, wherein said requested information type further signifies a difference in vendor of said products that can be used in combination with products that are used by the user, in terms of whether the vendor is the same or not with the vendor of the products that are used by the user;

distributing the additional product information to a user automatically corresponding to the additional products that can be used with the product used by the user and which match the user's requested information type; and

distributing the user information, also comprising a number of times a particular software product is used by the user, to a different vendor other than the software product's vendor ~~with the different vendor selling, that sells~~ products that may be of interest to users of the particular software product.

20. (previously amended) The additional product information distributed to the user as claimed in claim 18, wherein said additional product information distributed to the user includes a plurality of product information correlating to products used by the user as indicated by the user information.

---
